DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:
2. Claim 1 recites the phrase "the card connection adaptor with the second-standard compliant card is retained in the card retaining space is inserted into the card slot of the card slot connector housing" (emphasis added). The above limitation should be changed to "the card connection adaptor with the second-standard-compliant card retained in the card retaining space is inserted into the card slot".
3. Claim 1 further recites the phrase "at least substantially contained ... in a manner to prevent inadvertent disconnection" (emphasis added) which is an erroneous description of the invention. According to the specification (paragraphs 97 and 98), the card is contained in the card slot connector housing and the card connector adapter in a manner to prevent inadvertent disconnection, therefore the above limitation should be changed to "at least contained ... in a manner to prevent inadvertent disconnection."
4. Claims 2-15 are objected to because of their dependence on claim 1.
5. Examiner notes that applicant's representative, Carl Schaukowitch, was contacted on 5/11/2006 to discuss modification to the claims to overcome the minor informalities. However, an immediate agreement was not reached because of applicant's location and time zone.

Allowable Subject Matter

6. The following is a statement of reasons for the indication of allowable subject matter: prior art of record does not teach nor suggest the limitation, in combination with other limitations of claim 1, "a housing which holds the first connector, the second connector and the signal conversion circuitry, the housing having a card insertion port which opens generally perpendicularly to an adaptor insertion direction in which the card connection adaptor is inserted into the card slot of the card slot connector housing" and "wherein, when the card connection adaptor with the second-standard-compliant card retained in the card retaining space is inserted into the card slot of the card slot connector housing, the second-standard-compliant card is at least contained within both the card slot connector housing and the card connector adaptor in a manner to prevent inadvertent disconnection of the second-standard-compliant card from the card connector adapter while inserted in the card slot".

7. Examiner notes that the direction "generally perpendicular to the adaptor insertion direction" is interpreted as "a direction parallel to upper and lower faces of the card-shaped adaptor" according to paragraph 21 of the disclosure.

Conclusion

8. Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

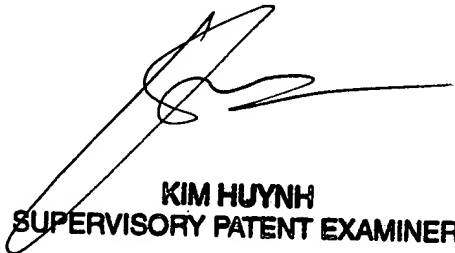

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
